

Good day to all!

In the age of progress in information technology, when every second person follows the news of the present and the past, we offer you something new, namely the Memorial Museum “Heroes”, which is constantly using VR technologies.

This is a technology museum equipped with the latest technology. In our halls not simple exhibits will be presented, but their digital copy made by using viar holograms.

Thanks to such technologies, the exhibits will remain intact and nothing will threaten their breakdown, and this technology will help to acquaint more than a dozen generations with the history of our Motherland. After all, all that is needed for this museum is walls and electricity, which will be produced using solar panels installed on the roof of the building.

Each visitor will be presented with VR glasses, with which you can see the variety of military exhibits. An individual guide will be presented to everyone who needs assistance and will tell you in detail about a battle, ammunition or equipment that is interesting to our visitor.

Our museum consists of 3 large halls.

The first one presents weapons and ammunition from various countries affected by the war. Patriotic portraits and letters that were sent to soldiers to the front.

The second hall presents expositions of battles that have happened over the past 200 hundred years. Thanks to VR technology, you can feel a wide range of emotions, feeling yourself on the battlefield.

The third hall presents one-time events that will take place on a certain day, and holographic guides will tell and describe them in more detail.

This museum can also be visited remotely by renting virtual reality glasses. This will help people who do not currently have the opportunity to visit the museum.

Also, thanks to technology, it will be possible to interact with exhibits. Thanks to sensors on the hands of people, cameras will read the movement of their hands and simulate the exhibit as the visitor wishes. Thanks to such technologies, it will be possible to completely disassemble a machine gun or a pistol and at the same time nothing will break or get damaged.
